Mean 11.716; Variance 1.945; scale 6.023 Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Lambda PRL2 is a cDNA library derived from equal
quantities of 4 pools of mRNA. The mRNA sources were 1) 7
day germinated etiolated seedlings; 2) tissue culture
grown roots; 3) staged plants half with 24 hour light
cycle, half on 16 hr light, 8 hour dark-rosettes; 4)
same plants as 3 but aerial tissue (stems, flowers and
siliques. The vector is BRL's lambda zip-Lox. The cDNA
inserts were directionally cloned with Sal-Not arms using
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 2;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              LOCUS R90544 478 bp mRNA EST 30-DEC-1997

/collided leaf mRNA from the oat cultivar 'Brooks'

/collided leaf mRNA from the capture of the collided leaf mRNA from the maplification, use M13 forward and reverse primers.

/clones from this library are designated with the prefix 'Clon' 'Roote: Clone CD01081 was reclored into the TA cloning vector and carries kanamycin resistance."

Lambda PRL2 is a cDN library derived from equal

quantities of 4 pools of mRNA. The mRNA sources were 1) 7

day germinated etiolated seedlings; 2) tissue culture

grown roots; 3) staged plants half with 24 hour light

grown roots; 3) staged plants half with 24 hour light

grown roots; 3) staged plants half with 24 hour light

grown roots; 3) staged plants half with 24 hour light

grie, half on 16 hr light, 8 hour dark- rosettes; 4)

same plants as 3 but aerial tissue (stems, flowers and

sliques. The vector is BRL's lambda Zip-Lox. The cDNA

inserts were directionally cloned with Sal-Not arms using

oligo dr primed cDNA.

/note="Wector: lambda Zip-Lox; Site_1: Sal; Site_2: Not;
Lambda FRL2 is a cDNA library derived from equal
quantities of 4 pools of mRNA. The mRNA sources were 1)
quantities of 4 pools of mRNA. The mRNA sources were 1)
quy germinated etiolated seedlings; 2) tissue culture
grown roots; 3) staged plants half with 24 hour light
cycle, half on 16 hr light, 8 hour dark- rosettes; 4)
same plants as 3 but aerial tissue (stems, flowers and
silnques. The vector is BRL's lambda Zip-Lox. The cDNA
inserts were directionally cloned with Sal-Not arms using
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 (bases 1 to 585)
